## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 2, 4, 6-8 and 10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Regarding claim 2, in the last paragraph, the phrase “by the protruded stop block; upper cambered concave corner; and lower cambered convex corner; the right upper stopper has three points in contact with a middle post and a lateral plate of a Y shape guide groove of the pull.” is totally incoherent and nonsensical. What is going on in this phrase? The clauses are separated by semicolons, which imply the claim is reciting a list of elements. However, the list starts out with “by the” which implies that there is some sort of functional relationship trying to be set forth. Yet, the functional relationship between the elements is not clear. The phrase ends with “the right upper stopper has three points in contact with a middle post and a lateral plate of a Y shape guide groove of the pull.” Out of the three points, only two were listed—a middle post and a lateral plate. Where is the third point? Also, it is not clear from the specification as to what the three points of contact are. Are these points contacted at some time during the use of the pull, not necessarily all at the same time or are they in contact at

the same time with the pull? Again what is going on? Is a method being claimed in this article claim, i.e., the method of attaching the pull to the zipper?

Also, the phrase sets forth "upper cambered concave corner" yet there has been no previous recitation of this "upper cambered concave corner." However, there was a recitation of an "upper cambered convex corner." Are these the same corner?

Also, the phrase sets forth "lower cambered convex corner" yet there has been no previous recitation of this "lower cambered convex corner." However, there was a recitation of a "lower cambered protruded corner." Are these the same corner?

These same problems exist in independent claim 7.

### ***Response to Arguments***

3. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
